

TS 97

Cam-action door closer

**Two strong global brands—
Dorma and Kaba – have
combined forces and are now
offering you a comprehensive
portfolio of smart & secure
access solutions, all from one,
reliable source.**

Our new product portfolio
includes everything from locks
and keys to a fully networked
electronic access solution, and
everything from door closers and
automatic doors to a mobile
partition system.

All supported by a
comprehensive service network.

A perfect combination of form and function

The dormakaba TS 97 is able to offer a very compact surface-mounted cam-action door closer available in the project sector. Single-piece face plates with internal end caps and uniform lengths of the door closer body and slide channel characterise the impressive design credentials of this product.

Like all dormakaba cam-action door closers, the TS 97 features the proven heart-shaped cam for maximum user convenience based on minimum opening effort. With its compact dimensions, the TS 97 ideally complements the overall appearance of any door.

Benefits

For the trade

- One closer model for all applications to simplify materials management and stocking.
- Single pack for easy handling.

For the installer/fabricator

- Universally applicable on both LH and RH doors.
- Quick and easy to fix with mounting bracket.

For the architect/specifier

- High-quality architectural solution for superior interior designs.
- Uniform lengths of body and slide channel for enhanced harmony of appearance.
- Single-piece faceplate without slots or fixing points.

For the user

- High ease of use and fully controlled, reliable closing with adjustable latching action.
- Limiting stop unit as standard to protect the wall and door.

Force profile

The heart-shaped cam and linear drive mechanism of the TS 97 ensure that the resistance encountered decreases almost instantly with the door opening action – so even children, the elderly and people with disabilities have no problem in passing through. User-friendly and reliable closing is also ensured by the delayed increase in the actuating torque at the 'latching' end of the sweep.

Standard and optional functions

The functions of the TS 97 can be individually adjusted to each door situation and matched to varying requirements. The closer speed of the TS 97 can be infinitely adjusted by means of a valve, and there is a second valve for adjusting the latching action. The closing force is adjustable between EN 2 and 4 by means of a screw.

- 01** Infinitely adjustable closing speed in the range 150° – 0°.
- 02** Infinitely adjustable latching action in the range 7° – 0°.
- 03** Adjustable closing force.

The integral cushioned limit stay of the TS 97 features progressive damping and helps to prevent a normally opened door from colliding with the adjacent wall. It can be adjusted to an opening angle between 80° and max. 120°.

The cushioned limit stay is not an overload protection device and in many cases is no substitute for a door stop.

The mechanical hold-open device enables doors to be held without fallback at an opening angle up to approx. 120°. The hold-open device is suitable for both LH and RH doors and is designed for retrofitting into the slide channel.

Not suitable for fire and smoke check doors.
